## Comfort

Tred-MOR® products are the flooring industry's premier cushion and acoustic systems. Under stretch-in broadloom carpet, these products provide the highest quality, longest lasting comfort underfoot.

Each product is made from high-density synthetic rubber, providing superior anti-fatigue comfort. With our guest room products, minor floor irregularities are smoothed out, allowing for an even feel as you walk. Additionally, the high-quality makeup of the underlayment adds superior cushioning and a rich fullness to any stretch-in broadloom carpet in areas of increased foot traffic.

## Noise

Performance and noise control are essential in high-traffic and heavy-use hospitality environments. Depending on the floor type, noise can easily be transmitted throughout a room or to an area below. With Tred-MOR, a sound barrier is created on the subfloor that significantly reduces the transfer of impact noise to the room below.

Tred-MOR products are made from 100% virgin synthetic rubber and are among the very best materials for use in reducing sound vibration. Our synthetic rubber utilizes its naturally dissipative properties while maintaining an open-cell structure. Since it is a vulcanized rubber, the walls of the cells won't break down and will retain protection from noise for the life of the floor.

## Moisture

Tred-MOR guest room products feature breathable moisture barriers. This means they are 100% resistant to liquids soaking through from the top, while simultaneously allowing vapor from the slab to permeate up through the floor system and escape into the atmosphere. This ensures there is no buildup of bacteria or mold under the liner.

These products are all protected by our Guardian™ antimicrobial treatment. While these products work to inhibit the growth of mold, mildew, and odor-causing bacteria, it's important to remember that no vapor barrier is capable of stopping 100% of vapor moisture from passing through.
